

# Rainscreen Cladding - ACM

## Oxford Science Park

The combination of the strong horizontals & verticals, and the requirement for a perfect finish on all of the materials lead the architects to choose ACM, which in this case was Reynobond, as one of the key components of this scheme.

The factory applied satin finish which when used in conjunction with the glazing and ceramic tiles illustrate how a simple rainscreen system can be, both functional and aesthetic.

We work closely with the architects at the initial stages of these projects and use a combination of three dimensional CAD and solid modelling to visualise the scheme. The manufacturing process is seamlessly integrated from the initial design through to installation process; we are one of a few companies who only use CNC routers, rollers and guillotines for all ACM fabrication.
